INFORMATION LITERACY ACTIVITY:

With so much information available on the internet, it can be hard to know what is true and what is false. See the example below. Can you name two other examples of things you always believed were true but later found out they were not?

Can you see the Great Wall of China from space?

It is a popular myth, but is it true?

Some people once believed that the Great Wall of China was so big, it could be seen from the surface of the Moon.

According to NASA, the Great Wall of China is not visible to the naked eye from space, even in low-earth orbit.
