TECHNOLOGY LITERACY ACTIVITY:

Design a Website Homepage

Start by researching what makes a homepage good and effective. Look into elements like layout, navigation, visuals, and user experience.

Design: Use any design program (e.g., Canva, Google Slides) to create your own homepage for a website of your choice. It could be a personal blog, an online store or a fan page about something you love (e.g., sports, video games). Remember to include key elements:

- A logo or website name
- A navigation bar with links to different pages
- A main image or banner
- A catchy headline or tagline
- A short description or introduction to the website
